### **Kre-Alkalyn<sup>®</sup>**

Creatine, as we've known it, is dead. After years of intensive pharmaceutical research, Sci-Fit introduces Kre-Alkalyn—a revolutionary, patented creatine formula that yields 10 times greater absorption than conventional creatine formulas. There's no loading phase. No bloating. No sugar or dextrose transport system. Just two capsules give you 10 grams of 100% digestible creatine.

If you prefer a liquid formula with all the benefits of Kre-Alkalyn capsules, try Creatine Infusion<sup>™</sup>. Unlike other liquid creatine, our patented suspension solution is pH balanced to maintain stability for up to three years. Liquid or capsule, Sci-Fit supplements are pure, potent and easy on your stomach.

Combine Kre-Alkalyn or Creatine Infusion with Sci-Fit Nitrox<sup>™</sup>, and you'll get pro-hormone-like results: Increased strength and endurance. Deep-tissue muscle stimulation. Enhanced muscle volume. Simply put, Kre-Alkalyn and Nitrox are the strongest, safest, legal anabolic compounds available.

If you're not using the purest, most digestible form of creatine, you're not getting the most out of your workout. Sci-Fit takes creatine to a whole new level. Sci-Fit Kre-Alkalyn. The new king of creatine.
